Sommario/riassunto

What are bone morphogenetic proteins (BMPs) and how can they be
 used in orthopaedic practice? Ever since Urist proposed in 1976 that
 protein factors from cortical bone appeared to modulate bone healing
 in animals, there has been a search for these mysterious osteoinductive
 components. Now that their structure has been elucidated, they have
 been purified and cloned, and are now available for the improvement of
 bone healing. The best source of BMPs is demineralised bone. This
 bone allograft is used to achieve greater osteoinductive capacity. But
 are the actions of procurement, processing, demi
