Note generali Includes bibliographical references and index. Nota di bibliografia Nota di contenuto Cognitive function, neuropsychological evaluation and syndromes of cognitive impairment -- Neurodegenerative disorders --Cerebrovascular disease: vascular dementia and vascular cognitive impairment -- The epilepsies -- Neurogenetic disorders --Inflammatory, immune-mediated, and systemic disorders -- Structural brain lesions -- Endocrine, metabolic, and toxin-related disorders --Infective disorders -- Neuromuscular disorders. Sommario/riassunto Essential to the management of patients suffering from neurological disorders is an understanding of the cognitive aspects of these conditions. This book begins with an outline of the various cognitive

domains and how they can be tested, before covering in depth the cognitive deficits seen not only in prototypical neurodegenerative

cognitive disorders (Alzheimer's disease, frontotemporal dementias, Huntington's disease, prionoses), but also in other common neurological disorders which may be complicated by cognitive impairment (stroke, multiple sclerosis, Parkinson's disease, brain tumours). This book is an essential reference text for all neurologists, not just those with an interest in cognitive disorders; and for general physicians and specialists who deal with any endocrine, metabolic, vascular, or infective disorders which may compromise cognitive function. Practitioners of professions allied to medicine which involve contact with cognitively impaired patients will also find this text useful.
