Sommario/riassunto

Cognitive-Behavioral Therapy (CBT) has been proven effective for treating Bulimia Nervosa and Binge Eating Disorder. However, this type of program requires at least 6 months of weekly sessions with a qualified mental health professional. If you suffer from an eating disorder and want to get treatment, but have little time to devote to therapy, a shorter, time-limited program may be right for you. This workbook outlines a Guided Self-Help (GSH) program based on the principles of CBT. Although sessions with a therapist or clinician are required, there are usually no more than 12 and each one is
