Mccullough -- Chapter Four. 'Les Missions Bottés': Religious Coercion Under Louis XIV / R.L. Mccullough -- Chapter Five. The Revolt Of The Camisards, 1702--1704 / R.L. Mccullough -- Conclusion / R.L. Mccullough -- Bibliography / R.L. Mccullough -- Index / R.L. Mccullough.
Sommario/riassunto	This is a study of the domestic application of armed coercion during the reign of Louis XIV. It examines the coercive aspects of tax collection, the royal response to tax revolts, and the use of force to convert the king's Protestant subjects and to wage a devastating counterinsurgency campaign against Protestant rebels in the mountains and plains of Languedoc. Relying heavily on archival sources, the study demonstrates that both the coercive inclination of Louis XIV and the coercive capabilities of the French army have been overstated. This

raises questions about some common assumptions regarding the role of the army in the projection of state power and its contribution to the process of state formation in Early Modern France.

Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Preliminary Material -- Introduction -- Origins of the Surinamese Freshwater Fish Fauna -- Faunal Composition -- Ecology -- Human Impacts and Threats to the Fishes -- Names and Classification of Fishes -- Preserving Fishes -- Dangerous Fishes -- Fish Colors -- External Anatomy -- Key to the (Sub)families -- Systematic Account of the Species -- Glossary of Technical Terms -- Bibliography -- Subject Index -- English Names Index -- Common Names Index -- Systematic Index.
Sommario/riassunto	With some 480 currently known fresh- and brackish-water fish species, Suriname has a rich inland fish fauna that is related to the most diverse freshwater fish fauna on planet Earth, i.e. that of the Amazon River. Interest in the freshwater fishes of Suriname by naturalists and scientists extends back over more than two centuries. Suriname is undoubtedly the site of origin of the oldest extant preserved specimens of South American fishes and 19 Surinamese fish species were described and figured by Linnaeus. Building on ichthyological studies initiated in the 1960's by the Brokopondo Project, this book provides an introduction to the freshwater fish fauna of Suriname, including

identification keys, photographs of the species and descriptions of their habitats, that should be especially useful to decision makers, conservation biologists, aquarium hobbyists and eco-tourists.
