	Sommario/riassunto	In this volume global health experts present compelling examples of evidence-based and culturally appropriate models for reducing global

health disparities. Divided into eight parts, coverage includes:. ? the legacy and role of racism in contributing to disparities. ? recommendations for research with practice applications. ? key role of collaborations, partnerships and community-based research. ? new internet technology. ? training of community health workers and peer educators. ? special populations considered most vulnerable. ? the task of closing the education and health gap by addressing
