Sommario/riassunto	Disability is an important issue for the transition countries of Eastern Europe and the former Soviet Union. Not only is a significant portion of their population either in poor health or disabled - with implications for labor force participation and productivity - but their aging demographics project an increase in the share of disabled people, raising concerns about the sustainability of social protection programs. Thus, if these heavily resource-strapped countries fail to deal in an efficient manner with disability and health issues in their population, they could face serious challenges to
