Sommario/riassunto	Many of the assumptions of Labovian sociolinguistics are based on results drawn from US and UK English, Latin American Spanish and Canadian French. Sociolinguistic variation in the French of France has been rather little studied compared to these languages. This volume is the first examination and exploration of variation in French that studies in a unified way the levels of phonology, grammar and lexis using quantitative methods. One of its aims is to establish whether the patterns of variation that have been reported in French conform to those reported in other languages.
