

1. Record Nr.	UNINA9910782592403321
Autore	Riggelsen Carsten
Titolo	Approximation methods for efficient learning of Bayesian networks [[electronic resource] /] / Carsten Riggelsen
Pubbl/distr/stampa	Amsterdam ; ; Washington, DC, : IOS Press, c2008
ISBN	6611733337 1-281-73333-4 9786611733339 1-60750-298-4 600-00-0346-3 1-4337-1131-1
Descrizione fisica	1 online resource (148 p.)
Collana	Frontiers in artificial intelligence and applications ; ; v. 168 Dissertations in artificial intelligence
Disciplina	519.5 519.5/42
Soggetti	Bayesian statistical decision theory Machine learning Neural networks (Computer science)
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references (p. [133]-137).
Nota di contenuto	Title page; Contents; Foreword; Introduction; Preliminaries; Learning Bayesian Networks from Data; Monte Carlo Methods and MCMC Simulation; Learning from Incomplete Data; Conclusion; References
Sommario/riassunto	This publication offers and investigates efficient Monte Carlo simulation methods in order to realize a Bayesian approach to approximate learning of Bayesian networks from both complete and incomplete data. For large amounts of incomplete data when Monte Carlo methods are inefficient, approximations are implemented, such that learning remains feasible, albeit non-Bayesian. The topics discussed are: basic concepts about probabilities, graph theory and conditional independence; Bayesian network learning from data; Monte Carlo simulation techniques; and, the concept of incomplete data. In order t
