

1. Record Nr.	UNINA9910782628003321
Titolo	Field experiments and measurement programs in geomorphology // editor, Olav Slaymaker
Pubbl/distr/stampa	Vancouver : , : University of British Columbia Press, , 1991 ©1991
ISBN	1-283-22599-9 9786613225993 0-7748-5660-2
Descrizione fisica	1 online resource (xi, 224 pages) : illustrations
Altri autori (Persone)	SlaymakerOlav <1939->
Disciplina	551.4/1/072
Soggetti	Geomorphology - Experiments Geomorphology - Fieldwork Geomorphology - Methodology
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Front Matter -- Table of contents -- List of figures and tables -- Preface -- Introduction -- The nature of geomorphic field experiments -- Drainage basin studies -- Rapid mass movement -- Surface wash -- Fluvial geomorphology -- Index
Sommario/riassunto	This book advances a typology of experimentation in the field science of geomorphology -- the study of the form of the earth's surface and the evolution of its relief. This typology is then applied to problems of total drainage basin change and subsets of processes of change associated with slopes and channels. Geomorphology has traditionally been a descriptive discipline concerned with the evolution of landscapes over very long time periods. However, since the 1950s there has been a strong trend towards the study of contemporary processes of change and the influence of society as well as of natural biophysical factors. Consequently, an experimental approach is becoming more appropriate. Commissioned by the International Geographical Union, this work is the first to document different field methodologies in geomorphology. The contributors are internationally known geomorphologists from Canada, the United States, the United Kingdom,

and Japan. They review methods, global coverage, and advances in understanding while at the same time promoting a more dynamic, more relevant, and more applied science of earth surface change -- the geomorphological aspects of global change.
