A.L.R. Perera.

This book provides guidance to policy makers seeking to design Sommario/riassunto

effective monitoring systems for disaster response management. This volume describes the data needs that arise after natural disasters, assesses current data management reform efforts, and discusses the

institutional preconditions and tactical and strategic steps necessary for establishing systems that work. Six country case studies elaborate lessons from the success and failures of efforts to establish innovative monitoring systems in the aftermath of disasters in Guatemala, Haiti, Indonesia, Mozambique, Pakistan, and Sri Lanka.
