A Comparative Analysis of Unemployment in Canada and the United States -- 6. Responding to Need: A Comparison of Social Safety Nets in Canada and the United States -- 7. The Distribution of Family Income: Measuring and Explaining Changes in the 1980's for Canada and the United States -- Contributors -- Author Index -- Subject Index
Sommario/riassunto	This volume, the first in a new series by the National Bureau of Economic Research that compares labor markets in different countries, examines social and labor market policies in Canada and the United States during the 1980's. It shows that subtle differences in

unemployment compensation, unionization, immigration policies, and income maintenance programs have significantly affected economic outcomes in the two countries. For example: -Canada's social safety net, more generous than the American one, produced markedly lower poverty rates in the 1980's. -Canada saw a smaller increase in earnings inequality than the United States did, in part because of the strength of Canadian unions, which have twice the participation that U.S. unions do. -Canada's unemployment figures were much higher than those in the United States, not because the Canadian economy failed to create jobs but because a higher percentage of nonworking time was reported as unemployment. These disparities have become noteworthy as policy makers cite the experiences of the other country to support or oppose particular initiatives.
