**Sommario/riassunto**

Although often neglected, An Examination of the Philosophy of Bacon is crucial to understand the epistemological basis for Maistre's critique of modern science as well as his criticisms of other aspects of Enlightenment thought. Given Maistre's stature in the history of conservative thought, his critique of Bacon remains significant for what it tells us about Maistre's own thought, what it reveals about attitudes toward science in his time, and what it contributes to issues that are still debated today. The work also showcases Maistre's polemical skills and his powerful prose style. Richard Lebrun's annotated translation includes Maistre's complete text, an extensive introduction that places the work in context and provides a critical exposition and assessment of Maistre's criticisms of Bacon, biographical notes on persons cited or mentioned by Maistre, and a bibliography. Differences between Maistre's manuscript and the printed text, first published fifteen years after the author's death, are noted, and Maistre's numerous citations have been identified, verified, and translated, making this the only authoritative and fully accurate edition of the work in either French or English.

| Sommario/riassunto      | <p>"Crafted with Bishop's usual assiduity and delightful style, this book provides much needed clarification of Jung's complex relation to Plato, and Jung's cryptic accounts of the Third and the Fourth." —Lucy Huskinson, Professor, Bangor University, UK. "Bishop's masterful analysis [reveals] a key to understanding the real-world significance and ethical challenge of Jung's entire clinical and cultural thought." —Roderick Main, Professor, University of Essex, UK. "This is a book brimming with original ideas and new connections [...]. I highly recommend this to anyone interested in the living legacy of Platonic thought and its influence on depth psychology." —Phil Goss, Associate Professor, University of Warwick, UK, and Jungian Analyst. This book examines the Jungian imperative that the Third must become the Fourth through the lens of Carl Jung's complex reception of Plato. While in psychoanalytic discourse the Third is typically viewed as an agent that brings about healing, the author highlights that, in the case of Jung, an early emphasis on the Third as the "transcendent function" gave way to an increasing insistence on the importance of the Fourth. And yet, he asks, why must "the Third become the Fourth"? Paul Bishop begins with a survey of work on Jung's relation to Plato, before turning to Jung's readings of the Timaeus and Black Books, as well as Goethe's Faust II and Nietzsche's Zarathustra. He proceeds to unpick Jung's statements on the Third and the Fourth through a compelling analysis of how Jung draws upon religious and alchemical traditions, Pythagorean numerology, his own dream-like experiences and Plato's cosmology. This book will appeal to practitioners and to scholars working in the history of ideas, psychoanalysis, philosophy, and psychoanalytic theory. Paul Bishop is William Jacks Chair of Modern Languages at the University of Glasgow, UK. .</p> |
