Sommario/riassunto	Clocks became common in late medieval Europe and the measurement of time began to rule everyday life. God's Clockmaker: Richard of Wallingford and the Invention of Time is a biography of England's greatest medieval scientist, a man who solved major practical and theoretical problems to build an extraordinary and pioneering astronomical and astrological clock. Richard of Wallingford (1292-1336), the son of a blacksmith, was a brilliant mathematician with a genius for the practical solution of technical problems. Trained at Oxford, he became a monk and then abbot of the great abbey of St Albans
