Sommario/riassunto

In this book Nobel Laureate Joseph Stiglitz and co-author Raaj Sah address one of development's major issues. Most of today's countries face town versus country tensions of increasing severity, including such issues as who should pay how much in taxes, who should get how much in subsidies, and what forms the taxes and subsidies should take. This volume analyses these tensions and issues, taking into account the great diversity of institutions and economic environments observed in different developing countries.
