Sommario/riassunto

Over 25 million people in the U.S. alone have benefited from statins (such drugs as Lipitor, Zocor, Crestor, Pravachol) in preventing stroke, heart attack, and other forms of coronary heart disease. But how did these remarkable, life-saving drugs come into being? In *Triumph of the Heart*, Dr. Jie Jack Li, a medicinal chemist and expert on drug discovery, tells the fascinating story of statins. Drawn from interviews with many scientists involved in the discovery and development of these drugs, the book illuminates the human side of science by revealing the role played by persistence, luck, and sudden insight that characterise major discoveries.
