Every community needs a forest of imagination -- How can we shift from a imaged-based city to a life-based city? -- A chimera called smart cities -- Beyond fill-in-the-blank cities -- Persuading policy makers to implement sustainable city plans -- To live or not to live: urbanisation and the knowledge worker -- City fragmentation and the commons -- Cities as global organisms -- From concrete structures to green diversity: ecological landscape design for -- Restoring urban nature and children's play -- Building cities: a view from india -- The barking dog syndrome -- Overcoming inertia and reinventing "retreat" -- Money for old rope -- An aesthetic appreciation of tagging -- Understanding arab cities -- Who can implement the sustainable development goals? -- Achieving sustainable cities by focusing on urban underserved -- The rebellion of memory -- Cities don't need "big" data- they need innovations that connect to the local -- Digital urbanisation and the end of big cities -- The art of engagement / Activating Curiosity -- Nairobi's illegal city makers -- Active environmental citizens with receptive government officials can enact change -- The sea wall -- Academics and non-academics: who's who in changing the culture of knowledge -- Creation? -- Private fears in public spaces -- Leadership: science and policy as uncomfortable bedfellows -- Sketches of an emotional geography towards a new citizenship -- The shift in urban technology innovation -- Greening cities: our pressing moral imperative -- Recognition deficit and struggle for unifying city fragments -- Disrespecting the knowledge of place -- Broadening our vision to find a new eco-spiritual way of living -- Synthesis.

Sommario/riassunto

Global urbanization promises better services, stronger economies, and more connections; it also carries risks and unforeseeable consequences. To deepen our understanding of this complex process and its importance for global sustainability, we need to build interdisciplinary knowledge around a systems approach. Urban Planet takes an integrative look at our urban environment, bringing together scholars from a diverse range of disciplines: from sociology and political science to evolutionary biology, geography, economics and engineering. It includes the perspectives of often neglected voices: architects, journalists, artists and activists. The book provides a much needed cross-scale perspective, connecting challenges and solutions on a local scale with drivers and policy frameworks on a regional and global scale. The authors argue that to overcome the major challenges we are facing, we must embark on a large-scale reinvention of how we live together, grounded in inclusiveness and sustainability. This title is also available Open Access.

Nota di bibliografia	Includes bibliographical references and index.
Sommario/riassunto	<p>Susan Makin has written a unique resource for art therapists working with patients or clients who find the concept of spontaneous artmaking daunting, and feel more comfortable with a structured framework. Therapeutic Art Directives and Resources: Activities and Initiatives for Individuals and Groups consists of a series of directives or suggestions for group and individual activities, with guidance on the suitability of each directive for clients with specific needs and ideas for further development. Her directives protect clients' creative freedom while providing a safe environment for exploring difficult issues. Commentaries by Cathy Malchiodi alongside the directives highlight particular uses of the directives and possible adaptations. Included at the front of the book are useful sample forms and hand-outs to give clients at the beginning of therapy as well as forms for the therapist's own record-keeping. These forms, like all the directives, have been used many times in clinical practice.</p>
