Sommario/riassunto	In the last two decades, new communication technologies have dramatically changed the world in which mental health professionals and their patients live. Developments such as e-mail, online chat groups, Web pages, search engines, and electronic databases are directly or indirectly affecting most people's routines and expectations. Other developments are poised to do so in the near future. Already, for example, patients are acquiring both good and bad advice and

information on the Web; many expect to be able to reach their therapists by e-mail. And already there is pressure from third party
