

1. Record Nr.	UNINA9910783464303321
Autore	Watts David
Titolo	IBM eServer xSeries and BladeCenter Server management [[electronic resource] /] / David Watts, Lesley Bain, Christian Leitenberger
Pubbl/distr/stampa	Research Triangle Park, N.C., : IBM Corp., International Technical Support Organization, c2005
Edizione	[1st ed.]
Descrizione fisica	1 online resource (318 p.)
Collana	Redbooks
Disciplina	004.6/186
Soggetti	Client/server computing - Management IBM computers Computer architecture
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	"This edition applies to: Baseboard Management Controller in xSeries servers and the eServer 325/326, Remote Supervisor Adapter II, part 59P2984, Remote Supervisor Adapter II SlimLine, part 73P9341, Remote Supervisor Adapter II-EXA, part 13N0382, BladeCenter Management Module." "March 2005." The initial e in eServer in the title appears as the symbol for electronic.
Nota di bibliografia	Includes bibliographical references and index.
Sommario/riassunto	The systems management hardware that is part of IBM xSeries and BladeCenter servers serves as an important part of the overall management strategy for customers. This hardware, either integrated into the server or BladeCenter chassis, installed at the factory as an adapter, or available as an option, provides vital information back to the administrator and gives the administrator the ability to remotely control the server, even when the operating system is not running. This IBM Redbook describes the full range of management hardware currently available for the xSeries and BladeCenter systems. We cover the integrated Baseboard Management Controller , the Remote Supervisor Adapter II family of adapters, and the BladeCenter management module. The user interfaces used to access this hardware are discussed in detail, as is information on how to configure security

features such as SSL and authentication features such as LDAP. This book is aimed at customers, IBM Business Partners, and IBM employees who need to understand the capabilities of our systems management hardware, and how to configure and use them to assist with the management of their servers.
