Sommario/riassunto

Since its original publication by the International Institute for Environment and Development in 1999, Policy That Works for Forests and People has been recognised as the most authoritative study to date of policy processes that affect forests and people. Providing a thorough analysis of the issues, options and factors that determine different outcomes and bolstered by a major annex containing tools and tactics, the book offers clear and practical advice on how to formulate, manage and implement policies appropriate to different contexts.
