Scaling Up HIV Prevention Programs; 8. Summary of Recommendations; Appendix A: The World Bank Response to AIDS in South Asia; Appendix B: Definition of Targeted and General Population Interventions; Appendix C: Country Analysis Summaries; References; Index
Sommario/riassunto	South Asia's HIV epidemic is highly heterogeneous. As a result, informed, prioritized, and effective responses necessitate an understanding of the epidemic diversity between and within countries. Further spread of HIV in South Asia is preventable. The future size of South Asia's epidemic will depend on an effective two-pronged approach: firstly, on the scope and effectiveness of HIV prevention programs for sex workers and their clients, injecting drug users and their sexual partners, and men having sex with men and their other sexual partners; and secondly, on the effectiveness of efforts
