Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di contenuto	Contents; Preface; Introduction; 1. " A Feeling of Belonging"; 2. " I Protest"; 3. Shortcut to Glamour; 4. Contested Beauty; 5. Riding the

Crest of an Oriental Wave; 6. Conclusion; Notes; Index; About the Author

Sommario/riassunto

When we imagine the activities of Asian American women in the mid-twentieth century, our first thoughts are not of skiing, beauty pageants, magazine reading, and sororities. Yet, Shirley Jennifer Lim argues, these are precisely the sorts of leisure practices many second generation Chinese, Filipina, and Japanese American women engaged in during this time. In *A Feeling of Belonging*, Lim highlights the cultural activities of young, predominantly unmarried Asian American women from 1930 to 1960. This period marks a crucial generation-the first in which American-born Asians formed a critical mass

Sommario/riassunto

Nerve sheath tumors can be a significant cause of morbidity for many patients. These include benign tumors such as schwannomas, diffuse and plexiform neurofibromas, and atypical neurofibromas, as well as the aggressive soft tissue sarcoma known as the malignant peripheral nerve sheath tumor (MPNST). Nerve sheath tumors occur sporadically and in the context of the clinical neuro-genetic tumor predisposition syndromes neurofibromatosis type 1 (NF1) and type 2 (NF2). Historically, the mainstay of treatment for nerve sheath tumors has been surgery. However, for both benign and malignant nerve sheath tumors, there is a high recurrence rate, highlighting the pressing need

for novel therapies. As we have entered the genomic era, the hope is that an improved understanding of the genetics, and therefore the biology, of these tumors will ultimately lead to therapies that result in better outcomes. In this Special Issue, we include both review articles and original research related to the genomic understanding and modeling of schwannomas, plexiform and diffuse neurofibromas, atypical neurofibromas, and malignant peripheral nerve sheath tumors as well as genomic methods being developed and applied to advance our understanding of these tumors.
