

1. Record Nr.	UNINA9910783791303321
Autore	Seytre Bernard
Titolo	The death of a disease : a history of the eradication of poliomyelitis / / Bernard Seytre, Mary Shaffer
Pubbl/distr/stampa	New Brunswick, N.J., : Rutgers University Press, c2005
ISBN	1-282-13440-X 9786613806987 0-8135-3786-X
Descrizione fisica	1 online resource (174 p.)
Altri autori (Persone)	ShafferMary
Disciplina	616.8/35
Soggetti	Poliomyelitis - History Poliomyelitis vaccine - History
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	The last victims -- A lifetime burden -- A virus with a long history -- The people versus polio -- Freed from the iron lung -- Coming along at the right time: Jonas Salk -- Behind the scenes -- The largest medical experiment in history -- The race for an oral vaccine -- Revolution in the production of vaccines -- Polio: programmed for defeat -- The end game -- The challenge of eradication.
Sommario/riassunto	In 1988, the World Health Organization launched a campaign for the global eradication of polio. Today, this goal is closer than ever. Fewer than 1,300 people were paralyzed from the disease in 2004, down from approximately 350,000 in 1988. In <i>The Death of a Disease</i> , science writers Bernard Seytre and Mary Shaffer tell the dramatic story of this crippling virus that has evoked terror among parents and struck down healthy children for centuries. Beginning in ancient Egypt, the narrative explores the earliest stages of research, describes the wayward paths taken by a long line of scientists--each of whom made a vital contribution to understanding this enigmatic virus--and traces the development of the Salk and Sabin vaccines. The book also tracks the contemporary polio story, detailing the remaining obstacles as well as the medical, governmental, and international health efforts that are currently being focused on developing countries such as India,

Pakistan, Nigeria, and Niger. At a time when emerging diseases and the threat of bioterrorism are the focus of much media and public attention, this book tells the story of a crippling disease that is on the verge of disappearing. In the face of tremendous odds, the near-eradication of polio offers an inspiring story that is both encouraging and instructive to those at the center of the continued fight against communicable diseases.
