Lots of Sommario/riassunto people have difficulty remembering people's names, even though they can easily recall other information about the person. As memory and

retrieval processes are central to cognitive psychology and

neuropsychology the study of proper names makes a fascinating and

practical focus of study. Using an information processing approach, Valentine, Brennen and Bredart consider evidence from speech production, face recognition and word recognition to develop a new functional model of the production and recognition of people's names. <B
