mind: an idealist proposal for integrating perception and behaviour in human geography; The behavioural environment: how, what for, and whose?

Sommario/riassunto

Placing human action and perception at the centre of the subject, this book considers the effects of mankind on the environment, drawing particularly from William Kirk's work on the behavioural environment model. Reviewing Kirk's original model in light of recent ideological debate and extensive new evidence, this collection of essays from leading names in the field shows that a behavioural approach is essential in understanding human geography and man's relationship with the ecological environment.
