Nota di contenuto	Facts and theories of adult development -- A trait approach to personality -- Measuring personality -- The search for growth or decline in personality -- Cross-cultural perspectives on personality and aging -- The course of personality development in the individual -- Stability reconsidered : qualifications and rival hypotheses -- A different view : ego psychologies and projective methods -- Adult development as seen through the personal interview -- A five-factor theory of personality -- The influences of personality on the life course.
Sommario/riassunto	Now in a revised and expanded second edition, this influential work argues for the enduring stability of personality across adult development. It also offers a highly accessible introduction to the five-factor model of personality. Critically reviewing different theories of personality and adult development, the authors explain the logic behind the scientific assessment of personality, present a comprehensive model of trait structure, and examine patterns of trait

stability and change after age 30, incorporating data from ongoing cross-sectional and longitudinal studies. The second edition
