

1. Record Nr.	UNINA9910784251903321
Titolo	Virtual ADMET assessment in target selection and maturation [[electronic resource] /] / edited by B. Testa and L. Turski
Pubbl/distr/stampa	Amsterdam ; ; Washington, DC, : IOS Press, c2006
ISBN	1-280-81056-4 9786610810567 1-4294-6772-X 1-60750-219-4 600-00-0604-7 1-4337-0155-3
Descrizione fisica	1 online resource (268 p.)
Collana	Solvay Pharmaceuticals Conferences ; ; v. 6
Altri autori (Persone)	TestaBernard TurskiLechoslaw
Disciplina	615/.190285
Soggetti	Drug development - Computer simulation Pharmacology
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Organized May 11-13th, 2005 in Lucerne, Switzerland.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Preface; List of Contributors; Contents; Conference Preface; The Risky Business of Developing Drugs; Benefits and Limits of in Silico Predictions; Musings on ADME Predictions and Molecular Structure; Lipophilicity: Its Calculation and Application in ADMET Predictions; Interpretation of the Role of the Electrotopological State and Molecular Connectivity Indices in the Prediction of Physical Properties and ADME-Tox Behavior - Case Study: Human Plasma Protein Binding; Molecular Descriptors for Predicting ADMET Properties; Molecular Fields to Assess Recognition Forces and Property Spaces Extracting Pharmacophores from Bio-Active MoleculesIn Silico Models for Human Bioavailability; In Silico Models to Predict Brain Uptake; Algorithms to Predict Affinity for Transporters; Predicting Affinity for and Metabolism by Cytochromes P450; Expert Systems to Predict Biotransformation; Expert Systems to Predict Toxicity; From in Vivo to in Vitro/in Silico ADME: Progress and Challenges; Author Index
Sommario/riassunto	Today, biologists and medicinal chemists realize that there is a strong

relationship between pharmacodynamic (what the drug does to the organism) and pharmacokinetic (what the organism does to the drug) effects. A significant contributing factor to the evolution in drug discovery was the methodological and technological revolution with the advent of combinatorial chemistry, high-throughput screening and profiling, and in silico prediction of target-based activity and ADMET (absorption, distribution, metabolism, excretion and toxicity) properties. High-throughput screening and in silico methods
