Sommario/riassunto	This book, the third of four in a series, coming after New Hegelian Essays, demonstrating how Hegel's philosophy perfects the rational presentation of any and all religious representation, and its successor From Narrative to Necessity, showing the coincidence of the doctrines of Trinity, Creation and Incarnation with the humanist ideal, expounds religion, and Christianity in particular, as continuous unfolding in history of Reason's Developing Self-Revelation, latterly in the crucible of Abso...

Sommario/riassunto	Germany's invasion of France in August 1914 represented a threat to the great power status of both Britain and France. The countries had no history of co-operation, yet the entente they had created in 1904 proceeded by trial and error, via recriminations, to win a war of unprecedented scale and ferocity. Elizabeth Greenhalgh examines the

huge problem of finding a suitable command relationship in the field and in the two capitals. She details the civil-military relations on each side, the political and military relations between the two powers, the maritime and industrial collaboration that were indispensable to an industrialised war effort and the Allied prosecution of war on the western front. Although it was not until 1918 that many of the war-winning expedients were adopted, Dr Greenhalgh shows that victory was ultimately achieved because of, rather than in spite of, coalition.

Nota di contenuto	Introduction -- Propositional Logic -- Predicate Logic -- Completeness and Applications -- Second Order Logic -- Intuitionistic Logic -- Normalization -- Gödel's theorem.
Sommario/riassunto	Dirk van Dalen's popular textbook Logic and Structure, now in its fifth edition, provides a comprehensive introduction to the basics of classical and intuitionistic logic, model theory and Gödel's famous incompleteness theorem. Propositional and predicate logic are presented in an easy-to-read style using Gentzen's natural deduction. The book proceeds with some basic concepts and facts of model theory: a discussion on compactness, Skolem-Löwenheim, non-standard models and quantifier elimination. The discussion of classical logic is concluded with a concise exposition of second-order logic. In

view of the growing recognition of constructive methods and principles, intuitionistic logic and Kripke semantics is carefully explored. A number of specific constructive features, such as apartness and equality, the Gödel translation, the disjunction and existence property are also included. The last chapter on Gödel's first incompleteness theorem is self-contained and provides a systematic exposition of the necessary recursion theory. This new edition has been properly revised and contains a new section on ultra-products.
