Livello bibliografico	Monografia
Note generali	Title from publisher's bibliographic system (viewed on 05 Oct 2015).
Nota di bibliografia	Includes bibliographical references (p. 155-181) and index.
Nota di contenuto	Cover; Half-Title; Series-title; Title; Copyright; Dedication; Contents; Figures; Tables; Preface; Acknowledgments; 1 The Persistence of Misery in Europe and America before 1900; 2 Why the Twentieth Century Was So Remarkable; 3 Tragedies and Miracles in the Third World; 4 Prospects for the Twenty-First Century; 5 Problems of Equity in Health Care; Postscript How Long Can We Live?; Appendix; Notes; Glossary of Technical Terms; Biographical Notes; References; Index
Sommario/riassunto	Nobel laureate Robert Fogel's compelling study, first published in 2004, examines health, nutrition and technology over the last three centuries and beyond. Throughout most of human history, chronic malnutrition

has been the norm. During the past three centuries, however, a synergy between improvements in productive technology and in human physiology has enabled humans to more than double their average longevity and to increase their average body size by over 50 per cent. Larger, healthier humans have contributed to the acceleration of economic growth and technological change, resulting in reduced economic inequality, declining hours of work and a corresponding increase in leisure time. Increased longevity has also brought increased demand for health care. Professor Fogel argues that health care should be viewed as the growth industry of the twenty-first century and systems of financing it should be reformed. His book will be essential reading for all those interested in economics, demography, history and health care policy.
