

1. Record Nr.	UNINA9910784424003321
Autore	Hartley Richard
Titolo	Multiple view geometry in computer vision [[electronic resource] /] / Richard Hartley, Andrew Zisserman
Pubbl/distr/stampa	Cambridge, UK ; ; New York, : Cambridge University Press, 2003
ISBN	1-107-14169-9 1-139-63612-X 1-280-45812-7 0-511-18451-4 9786610458127 0-511-18535-9 0-511-18711-4 0-511-31333-0 0-511-81168-3 0-511-18618-5
Edizione	[2nd ed.]
Descrizione fisica	1 online resource (xvi, 654 p.) : ill
Altri autori (Persone)	ZissermanAndrew
Disciplina	006.3/7
Soggetti	Computer vision Geometry, Projective
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	First published 2000.
Nota di bibliografia	Includes bibliographical references (p. 634-645) and index.
Nota di contenuto	1. Introduction - a tour of multiple view geometry -- Part 0. The Background: Projective Geometry, Transformations and Estimation -- 2. Projective geometry and transformations of 2D -- 3. Projective geometry and transformations of 3D -- 4. Estimation - 2D projective transforms -- 5. Algorithm evaluation and error analysis -- Part I. Camera Geometry and Single View Geometry -- 6. Camera models -- 7. Computation of the camera matrix -- 8. More single view geometry -- Part II. Two-View Geometry -- 9. Epipolar geometry and the fundamental matrix -- 10. 3D reconstruction of cameras and structure -- 11. Computation of the fundamental matrix F -- 12. Structure computation -- 13. Scene planes and homographies -- 14. Affine epipolar geometry -- Part III. Three-View Geometry -- 15. The trifocal

tensor -- 16. Computation of the trifocal tensor T -- Part IV. N -View Geometry -- 17. N-linearities and multiple view tensors -- 18. N-view computational methods -- 19. Auto-calibration -- 20. Duality -- 21. Chirality -- 22. Degenerate configurations -- Part V. Appendices -- Appendix 1. Tensor notation -- Appendix 2. Gaussian (normal) and chi-squared distributions -- Appendix 3. Parameter estimation -- Appendix 4. Matrix properties and decompositions -- Appendix 5. Least-squares minimization -- Appendix 6. Iterative Estimation Methods -- Appendix 7. Some special plane projective transformations -- Bibliography -- Index.

---

## Sommario/riassunto

A basic problem in computer vision is to understand the structure of a real world scene given several images of it. Techniques for solving this problem are taken from projective geometry and photogrammetry. Here, the authors cover the geometric principles and their algebraic representation in terms of camera projection matrices, the fundamental matrix and the trifocal tensor. The theory and methods of computation of these entities are discussed with real examples, as is their use in the reconstruction of scenes from multiple images. The new edition features an extended introduction covering the key ideas in the book (which itself has been updated with additional examples and appendices) and significant new results which have appeared since the first edition. Comprehensive background material is provided, so readers familiar with linear algebra and basic numerical methods can understand the projective geometry and estimation algorithms presented, and implement the algorithms directly from the book.
