

1. Record Nr.	UNINA9910784436003321
Titolo	Human herpesviruses : biology, therapy, and immunoprophylaxis // edited by Ann Arvin [and five others] [[electronic resource]]
Pubbl/distr/stampa	Cambridge : , : Cambridge University Press, , 2007
ISBN	1-107-16006-5 1-280-91694-X 9786610916948 0-511-30166-9 0-511-28953-7 0-511-29013-6 0-511-28821-2 0-511-54531-2 0-511-28889-1
Descrizione fisica	1 online resource (xx, 1388 pages) : digital, PDF file(s)
Disciplina	616.9112
Soggetti	Herpesvirus diseases
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Title from publisher's bibliographic system (viewed on 05 Oct 2015).
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Cover; Half-title; Title; Copyright; Contents; Contributors; Preface; Part I Introduction: definition and classification of the human herpesviruses; Part II Basic virology and viral gene effects on host cell functions: alphaherpesviruses; Part II Basic virology and viral gene effects on host cell functions: betaherpesviruses; Part II Basic virology and viral gene effects on host cell functions: gammaherpesviruses; Part III Pathogenesis, clinical disease, host response, and epidemiology: alphaherpes viruses Part III Pathogenesis, clinical disease, host response, and epidemiology: alphaherpes viruses VZV Part III Pathogenesis, clinical disease, host response, and epidemiology: betaherpesviruses; Part III HHV-6A, 6B, and 7; Part III Pathogenesis, clinical disease, host response, and epidemiology: gammaherpesviruses; Part IV Non-human primate herpesviruses; Part V Subversion of adaptive immunity; Part VI Antiviral therapy; Part VII Vaccines and immunotherapy; Part VIII Herpesviruses

Sommario/riassunto

This comprehensive account of the human herpesviruses provides an encyclopedic overview of their basic virology and clinical manifestations. This group of viruses includes human simplex type 1 and 2, Epstein-Barr virus, Kaposi's Sarcoma-associated herpesvirus, cytomegalovirus, HHV6A, 6B and 7, and varicella-zoster virus. The viral diseases and cancers they cause are significant and often recurrent. Their prevalence in the developed world accounts for a major burden of disease, and as a result there is a great deal of research into the pathophysiology of infection and immunobiology. Another important area covered within this volume concerns antiviral therapy and the development of vaccines. All these aspects are covered in depth, both scientifically and in terms of clinical guidelines for patient care. The text is illustrated generously throughout and is fully referenced to the latest research and developments.
