

1. Record Nr.	UNISA996278292003316
Titolo	Adoption of ISO/IEC 15288:2002 systems engineering : system life cycle processes // IEEE Computer Society Software and Systems Engineering Standards Committee, Institute of Electrical and Electronics Engineers, IEEE-SA Standards Board, American National Standards Institute, International Organization for Standardization, International Electrotechnical Commission
Pubbl/distr/stampa	New York, N.Y. : , : Institute of Electrical and Electronics Engineers, , 2005
ISBN	0-7381-4652-8
Descrizione fisica	1 online resource (vi, vi, 67 pages) : illustrations
Disciplina	005.1
Soggetti	Computer software - Development - Standards Computer software - Development - Management
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	This standard establishes a common framework for describing the life cycle of systems created by humans. It defines a set of processes and associated terminology. These processes can be applied at any level in the hierarchy of a system's structure. Selected sets of these processes can be applied throughout the life cycle for managing and performing the stages of a system's life cycle. This is accomplished through the involvement of all interested parties with the ultimate goal of achieving customer satisfaction. This standard is identical with ISO/IEC 15288: 2002 but contains an additional informative annex, Annex E, explaining the relationship of this standard to other IEEE standards.

#### **Sommario/riassunto**

There is probably no concept other than saving for which U.S. official agencies issue annual estimates that differ by more than a third, as they have done for net household saving, or for which reputable scholars claim that the correct measure is close to ten times the officially published one. Yet despite agreement among economists and policymakers on the importance of this measure, huge inconsistencies persist. Contributors to this volume investigate ways to improve aggregate and sectoral saving and investment estimates and analyze microdata from recent household wealth surveys. They provide analyses of National Income and Product Account (NIPA) and Flow-of-Funds measures and of saving and survey-based wealth estimates. Conceptual and methodological questions are discussed regarding long-term trends in the U.S. wealth inequality, age-wealth profiles, pensions and wealth distribution, and biases in inferences about life-cycle changes in saving and wealth. Some new assessments are offered for investment in human and nonhuman capital, the government contribution to national wealth, NIPA personal and corporate saving, and banking imputation.
