the role of the mental health professional; PART IV Special topics; 11 Traumatic death in terrorism and disasters; 12 Weapons of mass destruction and pandemics: global disasters with mass destruction and mass disruption; 13 Workplace disaster preparedness and response; 14 Healthcare systems planning
PART V Public health and disaster psychiatry15 Public health and disaster mental health: preparing, responding, and recovering; Index

Sommario/riassunto

Originally published in 2007, this was the first textbook to focus specifically on disaster psychiatry. It brings together the views of international experts to provide a comprehensive review of the psychological, biological, and social responses to disaster, describing evidence-based clinical and service-led interventions to meet mental health needs and foster resilience and recovery. Chapters address the epidemiology of disaster response, the neurobiology of disaster exposure, socio-cultural issues, early intervention and consultation-liaison care, the role of non-governmental organizations, workplace policies, and implications for public health planning at the level of the individual and the community. This book is essential reading for all those involved in preparing for traumatic events and their clinical and social outcomes for public health planning.
