Soggetti	Transportation - Environmental aspects Transportation - Public Transportation Transport industries
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Includes index.
Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	Prelims -- Introduction -- How to cast the future? -- How to cast the future? -- Looking over the horizon: visioning and backcasting -- Lessons from prospective research on sustainable transport carried out through the OECD EST and French PREDIT programs -- Drivers of freight transport demand and their policy implications -- Spatial economic interactions in sustainable settings -- Space - Economy interactions in the context of sustainability -- The metropolitan field: an emerging form that may condition the sustainability of transport -- Sustainable mobility and urbanity -- Movement of goods, services and people: entanglements with sustainability implications -- Effectiveness and acceptability -- Effectiveness and acceptability: the keys to implementation -- Sustainable transport and quality of life -- Transport policies: actions, intentions and perceived effectiveness -- Policy analysis of sustainable transport and mobility: the SUMMA project -- About the Authors.
Sommario/riassunto	Argues that the issues surrounding sustainable transport constitute a new - post-modern - phase in transport policy and management. This book is organized into three sections that discuss a major set of

challenges to the transition to a sustainable transport system.
