

1. Record Nr.	UNINA9910785088103321
Autore	Pickford Andrew T. W.
Titolo	Road user charging and electronic toll collection // Andrew T.W. Pickford, Philip T. Blythe
Pubbl/distr/stampa	Boston : , : Artech House, , ©2006 [Piscataqay, New Jersey] : , : IEEE Xplore, , [2006]
ISBN	1-58053-859-2
Descrizione fisica	1 online resource (378 p.)
Collana	Artech House ITS series
Altri autori (Persone)	BlythePhilip T
Disciplina	388.1/14
Soggetti	Electronics in transportation Motor vehicles - Automatic location systems Tolls
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Road User Charging and Electronic Toll Collection; Contents vii; Acknowledgments xv; Chapter 1 Introduction to Road User Charging 1; Chapter 2 Road User Charging and Toll Collection 11; Chapter 3 Technology Options for Charging 49; Chapter 4 Technology Options for Enforcement 97; Chapter 5 Vehicle Detection and Classification 133; Chapter 6 Central System 161; Chapter 7 Assembling the Pieces 195; Chapter 8 Case Studies 243; Chapter 9 Future Developments 293; Glossary 333; About the Authors 349; Index
Sommario/riassunto	This is your road map to today's technologies, systems, regulatory issues, and pricing schemes for electronic toll collection and road-user charging. This authoritative book lets you cut through the maze of available solutions and design options, so you can match the right technology to your policy needs. It clearly steers you through pricing and traffic management principles to easily establish and evolve policies and pricing schemes. The book also provides you with easy-to-follow end-to-end steps in system planning, technology selection, procurement and operations. This practical resource teaches you ways to implement an effective enforcement regime, while obeying laws on user privacy and balancing costs with returns. You find expert guidance on the charging process and technologies, vehicle

classification, standards and regulatory environments, and back-office operations. The book presents case studies and best practice examples from around the world showing successful local, regional, and cross-border policies for tolling, road use pricing and traffic demand management. The book provides not only a valuable information source for government officials and industry staff but also an essential reference text for postgraduate and undergraduate students alike.
