

1. Record Nr.	UNINA9910785152003321
Autore	Wienke Andreas.
Titolo	Frailty models in survival analysis // Andreas Wienke
Pubbl/distr/stampa	Boca Raton : , : Taylor & Francis, , 2011
ISBN	0-429-13960-8 1-4200-7391-5
Descrizione fisica	1 online resource (322 p.)
Collana	Chapman & Hall/CRC biostatistics series
Classificazione	31.80
Disciplina	519.5/46
Soggetti	Failure time data analysis - Mathematics Survival analysis (Biometry) - Mathematics Mortality - Mathematical models Demography - Mathematics
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	A CRC title.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Front cover; Contents; List of Tables; List of Figures; Preface; Chapter 1: Introduction; Chapter 2: Survival Analysis; Chapter 3: Univariate Frailty Models; Chapter 4: Shared Frailty Models; Chapter 5: Correlated Frailty Models; Chapter 6: Copula Models; Appendix A; References; Back cover
Sommario/riassunto	The concept of frailty offers a convenient way to introduce unobserved heterogeneity and associations into models for survival data. In its simplest form, frailty is an unobserved random proportionality factor that modifies the hazard function of an individual or a group of related individuals. "Frailty Models in Survival Analysis" presents a comprehensive overview of the fundamental approaches in the area of frailty models. The book extensively explores how univariate frailty models can represent unobserved heterogeneity. It also emphasizes correlated frailty models as extensions of univari
