Sommario/riassunto	This book is the latest in a series of respected volumes that provides an up-to-date review of some of the major chemistry topics related to the oil and gas industry. Divided into four sections, it looks in turn at the latest developments in environmental issues, new technology, applications and flow assurance. This reflects the increasingly

important role for chemical technologies in offshore, deep water and challenging environments, allied to developments of low environmental impact chemistry. Regulatory strategies are also discussed, from both the governmental and operational perspective.Ov

Sommario/riassunto

Public religious practice lay at the heart of civic society in late medieval Europe. In this illuminating study, Andrew Brown draws on the rich and previously little-researched archives of Bruges, one of medieval Europe's wealthiest and most important towns, to explore the role of religion and ceremony in urban society. The author situates the religious practices of citizens - their investment in the liturgy, commemorative services, guilds and charity - within the contexts of Bruges' highly diversified society and of the changes and crises the town experienced. Focusing on the religious processions and festivities sponsored by the municipal government, the author challenges much current thinking on, for example, the nature of 'civic religion'. Re-evaluating the ceremonial links between Bruges and its rulers, he questions whether rulers could dominate the urban landscape by religious or ceremonial means, and offers new insight into the interplay between ritual and power of relevance throughout medieval Europe.
