

1. Record Nr.	UNINA9910785524803321
Autore	Jones Bob Morris
Titolo	The Welsh answering system / / Bob Morris Jones
Pubbl/distr/stampa	Berlin ; ; New York, : Mouton de Gruyter, 1999
ISBN	3-11-080059-4
Edizione	[Reprint 2011]
Descrizione fisica	1 online resource (xvi, 360 pages)
Collana	Trends in Linguistics. Studies and Monographs [TiLSM] ; ; 120
Classificazione	EY 284
Disciplina	491.6/6/0141
Soggetti	Welsh language - Discourse analysis Welsh language - Social aspects - Wales Children - Wales - Language Questions and answers
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references (p. [317]-349) and index.
Nota di contenuto	Front matter -- Preface -- Contents -- Acknowledgements -- List of figures -- List of tables -- 1. Answering systems -- 2. Welsh echo responsives -- 3. Welsh echo and nonecho responsives -- 4. Discourse functions of Welsh responsives -- 5. A formal analysis of Welsh responsives -- 6. Children's use of Welsh responsives -- 7. Language contact: the influence of English -- 8. Internal causes of variation -- Appendix I. Conventions in the corpus examples -- Appendix II. Conventions in the interlinear glosses -- Appendix III. Additional examples of responsives -- Appendix IV. Examples of formal answering systems -- Notes -- References -- Index -- Errata -- Back matter

Titolo	Identification and Characterization of Genetic Components in Autism Spectrum Disorders 2020
Pubbl/distr/stampa	Basel, : MDPI - Multidisciplinary Digital Publishing Institute, 2022
Descrizione fisica	1 online resource (204 p.)
Soggetti	Biology, life sciences Genetics (non-medical) Research & information: general
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	The Identification of the Genetic Components of Autism Spectrum Disorders 2020 will be a useful resource for laboratory and clinical scientists, translational-based researchers, primary healthcare providers and physicians, psychologists/psychiatrists, neurologists, developmental pediatricians, clinical geneticists, teachers, special educators, and caregivers involved with individuals who have autism spectrum disorders (ASD), with the goal to translate information directly to the clinical, education and home settings. Other professionals, students at all levels, and families who are interested in this important neurodevelopmental disorder will find this textbook of value by obtaining a better awareness of the causes, testing, and understanding of genetic components leading to autism, and research that may open avenues for treatment with new approaches. This textbook includes nine chapters divided into three sections (clinical, genetics, other) written by experts in the field dedicated to genetics research and clinical care, description, and treatment by generating reviews for ASD and related disorders. These chapters include information on discoveries, risk factors, causation, diagnosis, treatment, and phenotyping with characterization of genomic or genetic factors and the environment, as genetics play an important role

in up to 90% of individuals with autism via over 800 currently
recognized genes.
