Sommario/riassunto

The present volume contains a selection of papers presented at the 23rd and 24th Comparative Germanic Syntax Workshop held at the University of Edinburgh and the Hogeschool-Universiteit Brussels. The contributions provide new perspectives on several topics of current interest for syntactic theory on the basis of comparative data from a wide range of Germanic languages. Among the theoretical and empirical issues explored are various ellipsis phenomena, the internal structure of the DP, the syntax-morphology interface, the syntax-semantics interface, Binding Theory, various diachronic developmen
