Sommario/riassunto

This study uses artefact distribution analyses to investigate the activities that took place inside early Roman imperial military bases. Focusing especially on non-combat activities, it explores the lives of families and other support personnel who are widely assumed to have inhabited civilian settlements outside the fortification walls. Spatial analyses, in GIS-type environments, are used to develop fresh perspectives on the range of people who lived within the walls of these military establishments, the various industrial, commercial, domestic and leisure activities in which they and combat personnel were involved, and the socio-spatial organisation of these activities and these establishments. The book includes examples of both legionary fortresses and auxiliary forts from the German provinces to demonstrate that more material-cultural approaches to the artefact assemblages from these sites give greater insights into how these military communities operated and demonstrate the problems of ascribing functions to buildings without investigating the full material record.

Sommario/riassunto	This book explores the emergence of Greek tragedy on the American stage from the nineteenth century to the present. Despite the gap separating the world of classical Greece from our own, Greek tragedy has provided a fertile source for some of the most innovative American theater. Helene P. Foley shows how plays like Oedipus Rex and Medea have resonated deeply with contemporary concerns and controversies--over war, slavery, race, the status of women, religion, identity, and immigration. Although Greek tragedy was often initially embraced for its melodramatic possibilities, by the twentieth century it became a vehicle not only for major developments in the history of American theater and dance, but also for exploring critical tensions in American cultural and political life. Drawing on a wide range of sources--archival, video, interviews, and reviews--Reimagining Greek Tragedy on the American Stage provides the most comprehensive treatment of the

subject available.
