	Sommario/riassunto	Changes in the philosophy of planning and the political influences behind it have led to an increasingly ambivalent approach to retail and commercial matters and a lack of clear goals and objectives as to what both central government and the local authorities should be concerned with. At the same time, changes within the distribution industry have brought new pressures to bear upon the environment which the conventional planning process seems ill-equipped to accommodate. This book, by an established leading authority, takes stock of the new problems to be confronted and provides the rudimen

	Sommario/riassunto	This book presents the state-of-the-art in supercomputer simulation. It includes the latest findings from leading researchers using systems from the High Performance Computing Center Stuttgart (HLRS) in 2021. The reports cover all fields of computational science and engineering

ranging from CFD to computational physics and from chemistry to computer science with a special emphasis on industrially relevant applications. Presenting findings of one of Europe's leading systems, this volume covers a wide variety of applications that deliver a high level of sustained performance. The book covers the main methods in high-performance computing. Its outstanding results in achieving the best performance for production codes are of particular interest for both scientists and engineers. The book comes with a wealth of color illustrations and tables of results.
