Sommario/riassunto	Retinal Detachment: Principles and Practice provides a historical review of current information on the diagnosis and treatment of retinal detachment. It is intended as both an introduction for graduate students in ophthalmology and a concise review or reference for practicing ophthalmologists. The volume defines the types of retinal detachments, their classifications and causes, and covers preoperative examination, preoperative management, prophylactic procedures, surgery, complications of surgery, and results of reattachment surgery.

It also includes a historical introduction, suggested readings at the end of each chapter, and the classic article 'The Technique of Binocular Indirect Ophthalmoscopy,' by Morten L. Rosenthal.

Sommario/riassunto

The IBA Rules are the most common feature of international arbitration

around the world, yet so far little work has been done exploring the Rules themselves. In this practical guide, Peter Ashford combines a detailed discussion of the Rules and the commentary from the Drafting Committee with a tabular view of the interaction between the Rules and those of the main arbitration institutions. Written by a respected and experienced arbitration practitioner, the guide conveniently brings into one place materials that will assist in the practical application of the IBA Rules. This contribution to an under-covered area of international arbitration provides an invaluable handbook for arbitration practitioners in law firms, chambers, and general or in-house counsel in large corporations.
