Sommario/riassunto

Ghana's demographic profile is changing, and demographic, epidemiological, and nutrition transitions are well underway. However, several of Ghana's health outcome performances, especially in terms of child health and maternal health, are worse than the levels found in other comparable lower middle income and health spending countries. The volume is timely, given the stage of the Ghana's development. It briefly discusses some of the debates in Ghana's health sector: decentralization and governance, private sector partnership, strengthening health systems, and health financing. It brings together
