Soggetti	Theater - Europe - History - 17th century Drama - 17th century - History and criticism
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	Magicians, necromancers and astrologers are assiduous characters in the European golden age theatre. This book deals with dramatic characters who act as physiognomists or palm readers in the fictional world and analyses the fictionalisation of physiognomic lore as a practice of divination in early modern Romance theatre from Pietro Aretino and Giordano Bruno to Lope de Vega, Calderon de la Barca and Thomas Corneille.

Sommario/riassunto

From its early focus on worker safety and job satisfaction, occupational health has expanded to encompass many disciplines, in keeping with the central place of work in people's lives and the multiple issues it entails. Today the field encompasses such disparate areas as work-related stress, social and economic costs of illness and injury, and wellness concepts. In keeping with this diversity, the *Handbook of Occupational Health and Wellness* analyzes and synthesizes the current research base in its theoretical, empirical, and practical dimensions. This comprehensive volume begins with an insightful overview of the field and conceptual models shaping current research and practice, then moves on to major symptoms and disorders in the workplace (e.g., pain syndromes, cancer) and risk factors for illness and injury. Chapters examine in depth epidemiology and assessment issues, gender and cultural considerations, health promotion, and illness prevention, and feature an evolving study of academic nursing program directors as they address occupational health challenges. Best-practice guidelines for preventing and intervening with workplace health and mental health problems are included as well. The *Handbook of Occupational Health and Wellness* possesses a breadth and depth of knowledge of great importance to a variety of professionals, including health policymakers, health psychologists, physicians, occupational therapists, vocational rehabilitation specialists, disability case managers, insurance/managed care/compensation professionals, human resource and employment personnel, and lawyers.
