#### Sommario/riassunto

This volume grew out of an interdisciplinary discussion held in the context of the Leverhulme-funded project 'Changing Beliefs in the Human Body', through which the image of the body in pieces soon emerged as a potent site of attitudes about the body and associated practices in many periods. Archaeologists routinely encounter parts of human and animal bodies in their excavations. Such fragmentary evidence has often been created through accidental damage and the passage of time - nevertheless, it can also signify a deliberate and meaningful act of fragmentation.
