Traces of superstrate verb inflection in Makista and other Asian-Portuguese creoles

Sommario/riassunto

Mindanao Chabacano owes many of its features (including over 10% of its basic and more of its non-basic lexicon) to the influence of Philippine languages, and some of its typological features, such as the basic VSO constituent order, typify Philippine languages but atypical of Ibero-Asian creoles as a whole. Its sizeable component of basic Philippine-derived vocabulary and its incorporation of structural features which cannot be traced back simply to Spanish, allow us to classify it as a mixed creole. In this paper I examine the extent to which various structural features of Mindanao Creole Sp
