## Sommario/riassunto

Commemorations as part of ceremonial politics normally are dialogues, speeches and symbolic actions (laying wreaths or lighting candles) between representatives and inside audiences. A TV transmission makes TV viewers another audience participating in an outside dialogue. The BBC transmission of the first UK Holocaust Memorial Day consisted of commemorative and informative discourses (aiming at "Lessons of the Holocaust") realized in footage, documentaries, testimonies, musical performances, addresses, voice-over texts, etc. Its complexity asks for a multimodal discourse analysis informed by d

Sommario/riassunto	This book introduces recent progress in the study of species diversity and community structures in terrestrial organisms conducted by three groups at Kyoto University. First, it explains species diversity and the functioning of fungi in Asian regions as outlined by metagenomic approaches using next-generation sequencing technology. The advances in high-throughput sequencing technologies accelerate the speed of species inventorying, especially for microorganisms. Second, the study of complex interactions between herbivorous insects and plants in the community and ecosystem contexts is presented. Recent studies in community and ecosystem genetics shed light on these complex interactions with novel approaches incorporating genetic perspectives including genetic variation and phenotypic plasticity in plant defenses against herbivores. Finally, recent studies on speciation processes in insects are described, processes that are related to the evolution of particular life history strategies. Included is an examination of two hypotheses that may be important in understanding diversification of insect species in heterogeneous environments in

space and time. This book is a valuable resource especially for ecologists who are interested in species diversity and community structure.
