### Sommario/riassunto

Lamaštu was one of the most important Mesopotamian demons, playing a dominant role in the magico-religious and magico-medical beliefs and practices of ancient Mesopotamia for nearly two millennia. Yet, she has never been the subject of a scholarly monograph dedicated to the textual and visual evidence for her, her activities, and the measures that ancient magical specialists took to counter her. This volume also falls short of this description, because it covers only one part of the material: it is an edition of the textual record only, which is, however, collected here as completely as seems possible today. Walter Farber, who has studied these materials for decades, presents a comprehensive collection of all of the known texts, the texts of the primary incantations in a “score” format, and transliteration and translation of a number of ancillary texts. This much-awaited volume will fill the void in the literature on this aspect of the life and thought of ancient Mesopotamian peoples regarding the character of this malevolent creature and the means of warding off the threat that she posed.

Nota di contenuto	From the Contents: Introduction to Aptamer and Cell-SELEX -- Cell-SELEX Based Selection of Aptamer for Cancer Cells -- Cell-SELEX Based Selection of Aptamer for Other Intact Systems.
Sommario/riassunto	This edited volume describes cell-SELEX as the fundamental tool used to generate aptamer molecules for a wide range of applications in molecular medicine, bioanalysis and chemical biology. Easily integrated into the natural heterogeneous cell matrix, aptamers can be effectively used in theranostics, bioanalysis, environment detection and biomedical studies. The book gathers reviews that reflect the latest advances in the field of aptamers, and consists in fourteen chapters demonstrating essential examples of these aptamers and aptamer-nanomaterial assemblies, depending on the types of applications and biological systems. It also includes a separate chapter on the utilization of aptamers in real clinics and what will be required to achieve this significant goal. The book will be both appealing and useful to a broad audience, including biologists, bioscientists, and clinicians whose

interests range from chemistry and biomedical engineering to cell and molecular biology and biotechnology. Weihong Tan is a Distinguished Professor of Chemistry and Biomedical Engineering at Hunan University, China and also a University of Florida Distinguished Professor and V.T. and Louis Jackson Professor of Chemistry at the University of Florida, USA. Xiaohong Fang is a Professor at the Institute of Chemistry, Chinese Academy of Sciences, China.
