Sommario/riassunto	When Dr. John Snow first traced an outbreak of cholera to a water pump in the Soho district of London in 1854, the field of epidemiology was born. Ernest Drucker's A Plague of Prisons takes the same concepts and tools of public health that have successfully tracked epidemics of flu, tuberculosis, and AIDS to make the case that our current unprecedented level of imprisonment has become an epidemic. Drucker passionately argues that imprisonment?originally conceived as a response to the crimes of individuals?has become mass incarceration: a destabilizing force, a plague upon our body
