| Sommario/riassunto | The importance of spiritual well-being and the role of ""meaning"" in moderating depression, hopelessness and desire for death in terminally-ill cancer and AIDS patients has been well-supported by |

research, and has led many palliative clinicians to look beyond the role of antidepressant treatment in this population. Clinicians are focusing on the development of non-pharmacologic interventions that can address issues such as hopelessness, loss of meaning, and spiritual well-being in patients with advanced cancer at the end of life. This effort led to an exploration and analysis of the work of V
