

1. Record Nr.	UNINA9910786961803321
Titolo	Linear systems : non-fragile control and filtering // Guang-Hong Yang, Xiaqng-Gui Guo, Wei-Wei Che, Wei Guan
Pubbl/distr/stampa	Boca Raton : , : Taylor & Francis, , 2013
ISBN	1-315-21592-6 1-4665-8036-4
Edizione	[1st edition]
Descrizione fisica	1 online resource (292 p.)
Classificazione	TEC007000TEC008000TEC009070
Altri autori (Persone)	YangGuang-Hong GuoXiaqng-Gui CheWei-Wei GuanWei
Disciplina	629.8
Soggetti	Linear control systems
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	Front Cover; Contents; Preface; Symbol Description; Chapter 1: Introduction; Chapter 2: Preliminaries; Chapter 3: Non-Fragile State Feedback Control with Norm-Bounded Gain Uncertainty; Chapter 4: Non-Fragile Dynamic Output Feedback Control with Norm-Bounded Gain Uncertainty; Chapter 5: Robust Non-Fragile Kalman Filtering with Norm-Bounded Gain Uncertainty; Chapter 6: Non-Fragile Dynamic Output Feedback Control with Interval-Bounded Coefficient Variations; Chapter 7: Non-Fragile H Filtering with Interval-Bounded Coefficient Variations Chapter 8: Insensitive H Filtering of Continuous-Time SystemsChapter 9: Insensitive H Filtering of Delta Operator Systems; Chapter 10: Insensitive H Output Tracking Control; Chapter 11: Insensitive H Dynamic Output Feedback Control; Bibliography; Back Cover
Sommario/riassunto	Designing controllers/filters such that the resulting closed-loop systems are non-fragile or insensitive with respect to the perturbations in the controller or filter coefficients has become an important research topic in many fields of engineering and science. This book develops a systematic presentation of the newly proposed systems methods for non-fragile/insensitive control/filtering of linear systems with respect to

controller/filter coefficient variations. It provides designs and guidelines that can be used to develop advanced non-fragile control techniques to improve reliability, maintainability, and survivability of complex control systems--
